## PERGOLINE

*Roofing and  
shading for terraces  
and guest gardens*

## The perfect roofing for your terrace

Everybody knows the situation: the sun is burning down and the one thing everybody wants is to be in the shade. Suddenly the clouds move in, it starts raining and your neighbours are starting to clear the terrace! But you don't need to panic! Because you enjoy sitting under your PERGOLINE come sunshine or rain.

## Experience the quality of WO&WO

**5** YEAR GUARANTEE

to EN13561

Like all our awnings, PERGOLINE is CE tested. High-quality and corrosion resistant materials and coatings make for a durable product (5-year warranty) that lets you enjoy every ray of sunlight.

### Limit dimensions

The maximum dimensions of PERGOLINE are not big enough for you? Then simply order your PERGOLINE as a multiple system and put up any number of systems next to each other.

Single system: 5 x 7 m x 3 m height (posts)

Multiple system: 8 x 7 m x 3 m height (posts)

### ! TIP ROOF PROTRUSION

The shaded surface underneath the PERGOLINE depends on the current position of the sun. In order to guarantee optimal shading when the sun is low and on Western facades, you can optionally extend the guide rails up to 1200 mm. This creates a roof projection that offers additional shade.

### Operation and installation

Contrary to other winter garden shading products, PERGOLINE does not need a classical substructure because it is installed with wall or ceiling brackets. The shading system is fitted with posts whose base plate is fitted on a firm surface. PERGOLINE can be operated comfortably with a motor or with a remote motor.

230V motor

remotely controlled 230V motor

### ! TIP SAFETY AND COMFORT WITHOUT PRESSING A BUTTON

The wind/sun sensor constantly measures the current intensity of the sun and the wind speed. When the sun shines, it deploys your awning automatically, if the wind is too strong, it retracts the awning automatically to protect it.

### ! TIP HEATER/LIGHT STRIP

Enjoy your terrace or balcony with comfortable infrared heat and the relaxing light of WO&WO. When the sun goes down, the South comes to your home. With the heating system and the light board, you create your own Mediterranean flair. Pleasant light and warmth make you independent from the time of day and the time of the year!

Anti-smoking laws force bars and restaurants to install roofing for outdoor areas. The new PERGOLINE terrace awning of WO&WO satisfies this requirement. The design is based on the successful XLINE winter garden awning. As a free-standing system with convenient wall installation, it has now found a new application in PERGOLINE.

### ! TIP PRINTABLE CLOTH

You run a coffee shop or a restaurant with guest garden, your customers are sitting happily in the shade produced by PERGOLINE. What better opportunity to advertise your establishment? You can have text or a logo printed on the cloth for perfect advertising. Or maybe you want a photograph printed on the PERGOLINE to create a special atmosphere?

### ! TIP RAIN DRAIN

With water gutters integrated in the guide rails, the system protects you and your terrace furniture even in light rain.

Easy-Clean

All-Weather

Sunworker Cristal

It is recommended to fit PERGOLINE with Soltis or Acrylic textiles. Soltis is the preferred choice for pure shading solutions, Acrylic had the added advantage of high water repellence.

#### PVC - Soltis®

Soltis® fabrics let more natural light through. With its extraordinary degree of transparency, it affords a good view of the outside. Furthermore, Soltis fabrics are especially weather resistant. They are able to withstand all climate conditions without suffering damage while retaining their pliability and mechanical properties.

#### UV-protection

Sattler acrylic fabrics are high-quality awning fabrics incorporating several reinforcements that make them ideal for demanding outdoor applications. The UV protection of the fabrics according to UV Standard 801 ranges from factor 40 to 80.

#### TexGard - Easy-Clean

Special textile finishing gives the product a series of useful properties. This includes low dirt absorption of the fabrics, high water repellence and reduced surface tension. Due to the special material attachment system, this effect is also extremely long-lasting. Moisture, water and dirt are kept out as much as possible.

#### All-Weather

The All-Weather quality is a fabric made of spinning-nozzle coloured acrylic with a coating on one side, combining optimum protection against the sun with protection against a drizzle or light rain.

#### Sunworker Cristal (waterproof cloth)

Translucent, transparent, waterproof, resistant, non-tearing, easy to clean... Sunworker Cristal combines these apparently incompatible properties in a single system.

### Frame colours

The standard colour is RAL 9016 white.

Optionally the awning is available in all RAL colours.

The RAL CLASSIC colour chart is reproduced with the kind permission of RAL GmbH, Sankt Augustin. The name RAL is trademark protected.

# WO&WO lets the sun shine for you

Our passion is to let precious sunlight into your home in a controlled manner so that you really feel the full benefit of "your" sun. WO&WO's tailored sun blind products transform your home into your personal sunny paradise.

The product range of WO&WO includes all articles for modern internal and external sun blinds and visual screens such as terrace awnings, façade awnings, roller shutters, venetian blinds, window shutters, external and internal blinds, pleated blinds, roller blinds, panel curtains, vertical blinds and insect screens.

## Internal sun blinds

The amount of light that enters a building can be controlled and optimised in many different ways. How this is achieved in a particular situation is partly a question of personal taste, but it also depends on the individual requirements: Do you want a transparent element or do you want it to darken the room? Should it consist of metal or fabric? There are no limits to your imagination!

## External sun blinds

An awning creates additional living space. It also decorates the house. Modern architecture increasingly relies on external systems for light control, such as venetian blinds, that provide excellent protection against the weather and act as a visual screen at the same time.
